PROFESSIONAL SUMMARY

MBA graduate with a Data Science emphasis and former collegiate athlete with hands-on experience using Python, SQL, Pandas, scikit-learn, and interactive visualization tools to analyze data and support decision-making. Experienced in machine learning, data cleaning, dashboard development, and translating analytical findings into clear, actionable insights for sports and business applications.

TECHNICAL SKILLS

Python • SQL • Pandas • scikit-learn • Excel • Plotly • Dash • Folium • Machine Learning • Statistical Analysis • Data Visualization

EDUCATION

Southeastern University

Aug 2025 - Aug 2026

Master of Business Administration, Data Science Emphasis

McPherson College

Aug 2023 - May 2025

B.S. Sport Studies, Minor in Coaching - *Summa Cum Laude*

CERTIFICATION

IBM Data Science Professional Certificate - IBM / Coursera

Aug 2026

12-course program covering Python, SQL, data analysis, data visualization, machine learning, and an applied data science capstone.

Athletics Operations Experience

Gameday Generalist

McPherson College

Fall 2023 - Spring 2025

Emporia State University

Fall 2021 - Fall 2022

- Assisted with game-day operations, event setup, and fan engagement during collegiate athletic events.
- Processed ticket sales and cash transactions while maintaining accurate financial records and attention to detail.
- Collaborated with event staff and represented the athletic department during events, recruiting, and admissions presentations.

Analytics Projects

MLB Pitch Velocity Prediction Model

- Built a Ridge Regression model in Python using Pandas and scikit-learn to predict MLB pitch velocity, achieving an R^2 of approximately 0.979.
- Cleaned data, engineered features, and compared regression models to support data-driven performance analysis.

SpaceX Falcon 9 Data Science Capstone

- Queried, cleaned, and visualized launch data using SQL, Python, Pandas, Plotly Dash, and Folium; developed interactive analysis tools and dashboards.
- Built and tuned Logistic Regression, SVM, Decision Tree, and KNN models with GridSearchCV; all achieved 83.33% test accuracy.
